Hybrid Arctic Titan Laminators - Questions & Answers

How wide, how simple to use? The Hybrid Arctic Titan 165 mounts prints up to 1,570mm wide, using Hybrid's broad range of pressure sensitive activated films. A highly versatile and easy to use solution the Hybrid Arctic Titan is very easy to operate and more than quick enough to get the job out of the door on time.

What about rigid materials? The manual roller opening permits the mounting on panels up to 12mm thick.

So how does it work? Simple loading of films and media, multiple memory settings to recall regular jobs plus an intuitive user display make this part of the process child's play. There's a scrap take-up reel to conveniently wind the release liner and the foot pedal operation allows hands free control of the machine.

Who can make money with it? Signage, photographic, copyshop - even screen print companies will immediately benefit. With a vast range of applications supported by a broad choice of films and finishes, the Hybrid Arctic Titan delivers an entry level professional solution for producing quality cold mounting in house.

Facts and figures. 220V, 3A max power requirement. Two unwinds and one liner rewind. 76mm incl. core adaptor down to 57mm.

Sizes and weights? Hybrid Arctic Titan 165: 1,900mm (w) x 1,270mm (d) x 635mm (h). 128kg maximum weight.
